### KEY PROJECTS

#### iFund

[Website](#) | [Github Repo](#) | [Slideshow](#)

- A two-sided crowdfunding website in which users can CRUD and donate funding projects
- Features include image upload and retrieval using AWS S3, user login and authentication using Devise, and payment processing using Stripe
- Created with Ruby on Rails using a PostgreSQL database

#### Ready To Munch

[Github Repo](#)

- Built during a hackathon, this app uses the tasty API to find and display 7 recipes randomly or depending on a keyword search
- Features include searching recipes with a specific keyword, showing random recipes and their ingredients, and printing the details of each recipe below once a recipe is clicked
- Created DOM manipulation with vanilla JavaScript

#### Movie Curation

[Website](#) | [Github Repo](#)

- A movie curation app created with React using The Movie DB API
- Used React Router for manipulating routes, Styled Components for styling the app

### EMPLOYMENT HISTORY

#### Translator · Freelance

November 2019 - June 2021

- Transcreated and localised advertising copies and marketing content to effectively communicate with the target market
- Translated and reviewed the contents regularly for specific companies and designer brands as a preferred linguist to provide enhanced translation quality consistently
- Developed style guides for clients to ensure overall consistency

#### Campaign Coordinator · Amnesty International Korea

May 2013 - November 2017

- Created and localised campaign materials written in English to Korean to enhance public awareness
- Developed on/offline campaign tactics to optimise campaign effect
- Cooperated with other stakeholders, such as media outlets and local organisations to reach out to more potential supporters
